

FARGO Telecom, a leader in the M2M industrial application GSM/GPRS wireless connectivity market for the last 10 years, has announced a solution offering encompassing RF and GPS. The enhanced offering will directly complement its flagship Wavecom range of GSM/GPRS/EDGE products & technologies, as well as cater for a number of value added service offerings - including design/ development consultancy, facilitation of approvals, tailored PC board design, plastic moulding and tool making, customized training, as well as direct access to a state of the art lab facility and technical expertise. Xavier Dupont, FRAGO Telecom GM, comments: "The expansion of our offering is in line with Wavecom's enhanced software and services strategic thinking and parallel objective to be the leading player in the M2M wireless industry. Our purpose is to offer the market at large, and our extensive customer base, a substantially more compelling, unique and comprehensive value proposition & service experience - without moving away from our core focus which still remains end to end wireless solutions."

[FARGO Telecom Announces 2 New Product Ranges](#)

Coronis RF Solutions for Local Area Mesh Networks

Coronis Systems is a market leader for wireless sensor and RFID solutions. The **Coronis** range of ultra low power products is ideal for establishing wireless mesh networks within a 4km radius, or, through a series of repeaters, across several kilometers for a wide range of applications such as Automated Metering, Telemetry, Security, Data Collection, Asset Tracking and more.

Coronis Features:

- **Ultra-low power: up to 15 years battery life**
- **Ultra-long range: 3km point-to-point, larger distances using a**
- **network of repeaters**
- **Small footprint**
- **LowCost**
- **Wireless mesh network topologies for easy configuration**
- **Robust and resistant to physical and electrical interference**

eRide GPS Solutions - Advanced Positioning

Technology

The advanced positioning technology in eRide modules and chipsets quickly pinpoints the eRide wireless GPS modules both indoors and outdoors, anytime and anywhere in the world. eRide provides a superior performing, flexible, cost effective, and fast time-to-market wireless location solution.

The eRide products include an ultra-sensitive GPS chipset, scalable client navigation and server software designed for high performance GPS aiding and location processing. The technology is independent of operating system, microprocessor and network infrastructure, so can easily be deployed into any wireless PC board and any network.

eRide Features:

- Ultra-sensitive GPS
- Low cost
- Independent of microprocessor
- Independent of operating system
